

**Don't get stressed
about frost**

Fast
more than advice

Anti-Stress is a non-toxic biodegradable water-based polymer coating that can minimize the damage of climate related stress. Anti-Stress provides a permeable film on the leaf surface and can reduce the effects of:

- Water and drought stress
- Heat and sunburn
- Drying winds
- Frost and freeze
- Rapid temperature variations
- Transplant shock

- Improves tolerance to frost by 2 - 2½° C
- Does not interfere with photosynthesis
- Does not wash off during normal rainfall conditions
- Does not restrict plant growth
- Remains effective for 45 - 60 days if physical covering properties are not broken due to new growth
- Reduction of sunburn damage to foliage and young fruit
- Allow enough time for the Anti-Stress to completely dry before frost occurs

Application rate: 5 L/400 L water, spray at 400 L/ha
