

# Wildfire® RKD (cov)

*'Picks 18-21 days earlier than normal Gala'*

Wildfire® RKD is a striped, clear-coloured, early ripening Gala with an intensity of colour close to Buckeye.

Early Gala / Wildfire® RKD (cov) comes from Washington State (USA), where it was found about ten years ago. In the past decade it was confirmed year after year that Wildfire® ripens 18 to 21 days earlier than most other Gala clones. No other clone known until now ripens that early.

Wildfire® RKD has just started to be planted in UK. FAST LLP can supply these trees but there is limited availability for season 2022/23 of 50,000 trees.

**Try it for yourselves and see!**
